PATROL

SOLANA ANALYTICS & SCAM PROTECTION – D030P

"Safety isn't a feature of this product. It's the only reason it exists."

AUTONOMOUS ON-CHAIN AUDIT · CENTER FOR DIGITAL TRUST

Verify first. Never buy *blind*.

PATROL scans Solana every ten seconds, audits every new token on-chain, and publishes a verdict in the live feed before you've had time to click buy. Non-custodial by design — it never holds funds and never issues a buy or sell signal.

98.6% of tokens launched on Pump.fun are rug pulls or pump-and-dumps.
\$151M+ lost across three Solana DEXs in six months.

METHODOLOGY BELOW — EVERY DECISION IS LOGGED TO THE PUBLIC ARCHIVE

01 — METHODOLOGY

How the score is built

0–100 points across six weighted checks, recomputed continuously as each token trades. Nothing here is a black box.

25% Security Has the creator renounced mint authority? Do the top 10 wallets hold under 30–40% of supply? Is liquidity locked or burned? Serious red flags cut this score to near zero.	20% Liquidity Can you actually sell? Pools under \$1,000 score zero. Pools growing steadily toward \$10,000–\$30,000 score highest.	20% Momentum Buy and sell volume over the last five minutes, and the ratio of buyers to sellers. Broad, one-sided buying scores highest.
15% Market Trading volume and market-cap sanity checks — over \$5,000 traded in five minutes scores 85–100%; zero volume scores 10%. Flags caps that dwarf real liquidity.	15% Wallet Has the creator already sold or emptied their wallet? Locking in profit early reads as a signal against a future rug pull, not against it.	5% Data quality A penalty for gaps in source data — for example, holder counts DexScreener couldn't return. Unknown risk is still risk.

02 — MONITORING FEED

Every token, the moment it's discovered

No request required. PATROL finds it first — you just watch the ticker.

Token	Discovered	Score	Δ from T0	Status
\$WCAT NEW	4 sec ago	81	+12.4%	Monitoring
\$PLUME	1 min ago	63	+4.0%	Monitoring
\$SORA	3 min ago	57	-1.8%	Watch
\$NOVA	6 min ago	94	+187.0%	Growth leader
\$FROG9	7 min ago	22	-3.1%	Quarantined
\$RUGZ	9 min ago	08	-71.2%	Quarantined

03 — GROWTH LEADERS

Passed audit. Up 50%+ from T0.

Tokens move here automatically the instant they cross +50% from discovery — proof the filter isn't just theoretical.

Token	Discovered	Score at T0	Δ from T0	Status
\$NOVA	6 min ago	94	+187.0%	Growth leader
\$AXIOM	22 min ago	88	+96.5%	Growth leader
\$TIDE	41 min ago	79	+58.2%	Growth leader

04 — QUARANTINE ZONE

Every rejection, stamped with its reason

Nothing is hidden after the fact. The public archive of what PATROL turned away, and why.

\$RUGZ AUG 29, 14:02 UTC REJECTED Top-10 wallets hold 91% of total supply. Mint authority remains active.	\$MOONX AUG 29, 13:47 UTC REJECTED Liquidity pool under \$400 at discovery, never crossed the \$1,000 floor.	\$FROG9 AUG 29, 13:19 UTC REJECTED Creator wallet sold 68% of supply within four minutes of launch.

05 — ABOUT

"Safety isn't a feature of this product. It's the only reason it exists."

PATROL is built and maintained by the **Center for Digital Trust**, a Ukrainian non-profit working to make trust verifiable rather than declared. It's the organization's second initiative alongside MD System, an evidentiary integrity platform for public institutions — both share one principle: transparent, non-custodial, on-chain verification, with no single point of failure and no authority to edit the record.

An open, public API for wallets and DEX aggregators is planned as the next phase — so any project in the ecosystem can carry the same security score, without building an audit pipeline of its own.

PRINCIPLES

Open source	01
Non-custodial	02
No trading signals	03
Public archive of every decision	04

ORGANIZATION

Center for Digital Trust — NGO, Ukraine

NETWORK

Solana (core built to extend to other chains)

STATUS

Paper-trading engine live · public web release in progress

PATROL

An open, non-custodial security layer for the Solana ecosystem. Free to use, free to audit, built in public.
